Pre-practice and preparation for recommended PRO1 standards and techniques. This is a cornerstone course for anyone traveling to Nevada Nevado Earth. Those interested in taking courses from listed providers should independently investigate and evaluate those course providers and their specific courses and programmes. Most avalanches that transport or bury a person are caused by that person or someone in their group; an immediate response from members of the group involved is the best chance of survival. This three-day course (24 hours of instruction, combining class and field), taught by experienced avalanche professionals, will introduce you to the concepts of avalanche risk assessment, decision-making and rescue. A3 believes that avalanche education can be conducted in a more thoughtful, consistent, and accountable way and can achieve more constructive results for students when avalanche course providers and instructors in the United States strive to adopt common guidelines and practices. Are you a dedicated winter recreational keen to explore more challenging and complex avalanche terrain? Apply to be listed here. Bridge courses will be offered during the transition period 2017-2020. PROAVSAR. This independent course supports professional SAR programs and operations. This one-day course (8 hours of instruction, combination of class and field) focuses exclusively on how to prepare for and respond to an avalanche. incident.
