### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with consew 255rb-2 parts manual . To get started finding consew 255rb-2 parts manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# consew 255rb-2 parts manual

Save time and money with our instant download Instruction manuals. Your manual will be available for download immediately after your order is completed. Just click the link on your order confirmation. The physical copy of the instruction manual is a soft cover printed photocopy. Use of them does not imply any affiliation with or endorsement by them. There are literally hundreds of different brands and types of machines in use and hundreds of thousands of parts available for them. So do us both a favor Print a copy of your parts book from our website and keep it with the machine, then order by number. Downloads for many of the most common machines are shown below, but we can get you plenty of others. Just request one by the brand and class of machine and we'll email it to you. And even if some parts you need are not our web site, we can usually get them to you; just give us the numbers. Thanks. You can then type in your model number and hit enter it will tell you if the instruction manual is on this page and navigate you to it. If the manual is not on this page, we do not have it in our collection. Join our mailing list. I just bought a Consew 255 last week I tested it out before purchasing it and it worked great. Now that Im home I cant seem to get the tension right lots of looping on the underside. Any ideas on what Im doing wrong. Im pretty certain Ive threaded the machine correctly. Ive tried tightening the top needle tension as tight as possible tried sewing then loosening it out and no luck About half the people said do not wrap around the pin while the other half said to. Hopefully this will solve the issue.I followed step by step several times but Im not seeing much difference. On the left the needle tension was as loose as could be and the right is as tight as I could get it. Do I maybe need to adjust bobbin tension.<http://vwtint.com/userData/board/98-ford-escort-service-manual.xml>

- **1.0.**

I havent touched it at all, it hasnt been messed with since before I purchased it so Im not sure why this would be the issue but its all I can think of It didnt come with a manual but I have looked it over online it wasnt much help Check it like MikeSC said.Had this same issue when I got my 211 years ago and tried to follow the singer explanation on how to install it. Needless to say I didnt get it quit right lol. I have been inserting the bobbin the wrong way, apparently. Ive watched a couple of youtube videos with some saying make a P with the bobbin and some saying make a 9.It has been sewing fine. I just reversed it and sewed several different thicknesses of leather and it still seems to be sewing ok.The bobbin rotates CW as you pull thread off.The small pin that releases the tension when you raise the presser foot may be stuck.This is easily done and not uncommon. NCArcher could be correct about the pin being stuck but sometimes the discs dont open up much when you are threading up and it it is very easy to overlook. When you are sure it is between the discs and down to the needle, pull the thread and tighten the tensionuntill it becomes a bit hard to pull.I should say with the presser feet down first. As it is I would guess it is easy to pull.I have been inserting the bobbin the wrong way, apparently. When you are sure it is between the discs and down to the needle, pull the thread and tighten the tensionuntill it becomes a bit hard to pull.I should say with the presser feet down first. As it is I

would guess it is easy to pull. So I am wondering if part of the problem here is the safety clutch needs to be reset. Timing and probably bottom feed would be inconsistent. This is purely a guess but maybe worthwhile to check. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. The condition of the original item is very good. No pages appear to be missing. Handwriting may be present. Approximately 40 pages. Note that this is a copy of the manual. We have a large library thousands of manuals. We would be glad to help you look for that hard to find manual. Please ask. Shipping Weight 12 ounces Pictures sell. Auctiva gets you noticed. This is ideal as a multipurpose oil for lubricating of sewing and knitting machines. Due to postage restrictions please contact SMA regarding this product to arrange a suitable carrier. Helps prevent thread breakage. You can still read the content but will no longer be able to post. Posted 24 July 2018 at 125pm I bought a Consew 255 no letters in model number. It was advertised as a 225 and I was real excited because I see there are many similar machines and the Consew 225 is a supposed clone of the Singer 111 so parts were readily available. After seeing I actually have a 255 instead. I am a bit more nervous because I dont see much info on this unit. Does anyone know if this is a clone of a certain model singer and if parts interchange. Thanks Steve There are several other posts you might want to check or try posting a clarification question there. I checked there and the Seiko is almost exactly what I have but mine does not have reverse. I did check out all Consew topics on the site and it was really helpful. Apparently the Singer 111W was the precursor of many compound walkingfoot machines. Look at chapter 4 of the manual in the following link and see if your machine is depicted on page 42. Here is a link to an edited copy of the manual that might be a bit more readable. I have several Singer 111W155 pdf manuals that I could send you. Documentation and parts are readily available, and many types of feet are compatible. My first industrial machine was a Singer 111W155, and it was a wonderful machine.

There is little I could not do that I can do with my Juki other than a few reverse tricks. However, lack of reverse is not as limiting as some might think. Here are four ways to lock stitches at the start and end of a run without backtack reverse 1. Bury the needle, turn the material end for end and sew over the seam. The result is the same as a backtack but not always practical for large projects. 2. Sew to the end of the run. It is important when pulling the material toward you to maintain upper and lower thread tension to avoid a jam. 3. At each end of the run, leave several inches of thread. Tug the thread on the underside and pull the topthread through. Tie off the two threads with a surgeons knot. A square knot can be used, but a surgeons knot is more secure. 4. Same as above, but leave even longer threads. Do not pull through. Thread a needle on each and sew several stitches back

through the same holes in the seam, essentially the same as a manual saddlestitch. A hassle, but the resulting backtack should be more secure than a machine backtack. Also, the result is cosmetic, such as for sewing leather. A more complicated lackofreverse situation would be sewing in the middle of a large project and needing to sew around a rectangular patch for example. Top, bottom, left and right refer to the original orientation of the material. Again, when the needle is up, maintain thread tension to avoid a jam. The only lack of reverse without mitigation I am aware of is using reverse to shorten the length of a stitch at the end of a run. With the machine not running, partially engaging reverse and manually cycling the machine with the handwheel can be used to temporarily reduce the stitchlength at the end of a run to finish at a location short of the set stitchlength. My machine looks very similar to the 111w155. I can see a few things that are different. 1. Mine is a semi self oiling. It has oil holes throughout but also has an oil reservoir up top and also below. 2.

<https://www.euralux.com/images/canon-eos-250d-manual.pdf>

Fewer oil holes on machine. 3. The thread guide on top is the horizontal type 4. Not sure on the bobbin size but mine is huge, bigger than an M I was able to time the hook Saturday using instructions from the 111w155 i think I will try a few parts like needle plates from the 111w155 and see how they fit. Thanks again. I am having fun with it while I practice for my boat cover. So far I have sewn bags for my ATV, valences for my wife, box cushions for our patio glider and a tool bucket insert. I just got my quick fit snap parts. Now I just need for the boat to come out of the water. So i can measure and order more sunbrella. Cant wait. Thank you for giving us the opportunity to serve you. If you dont see it here, it doesnt mean we dont have it. We will also purchase your excess Sewing equipment. From one machine to an entire factory. I was wondering if anyone has a link to the Navy manual for the Consew 225 on pdf they can share or a link to where I can find it. I have looked everywhere. Would really love if someone could drop a link or post pictures of their Consew 206RB Parts Manual and Service Manual. Thank you so much in advance. View and Download Consew 230 operators manual online. 230 Sewing Machine pdf manual download. Also for 230b.
