If you use Pay Pal, use the link below. Use the above address for a check, M.O. or cash. NOTE they only print in Black and White. It starts on the last page of this manual. The "Quick Start Guide" helps you start using your MANUAL new camera right away. It starts on the last page of this manual. If the camera or memory card is faulty and the images cannot be recorded or downloaded to a computer, Canon cannot be held liable for any loss or inconvenience caused. If anything is missing, contact your dealer. Introduction Camera basics.

Getting Started Basic Shooting and Image Playback Fully automatic shooting for different subjects. Advanced Shooting Techniques Shooting features for specific types of subjects. More Advanced Techniques Advanced shooting features. If you accidentally drop the camera into water, promptly consult your nearest Canon Service Center. Wipe off any water droplets with a dry cloth. If the camera has been exposed to salty air, wipe it with a wellwring wet cloth. In case visible spots still remain after the automatic sensor cleaning, having the sensor cleaned by a Canon Service Center is recommended. Handling Precautions Contacts. To charge the battery, see page 24. Attach the lens.

For EF lens When attaching an EFS lens, align it with the white index on the camera. For other lenses, align it with the red index. To delete an image, see "Erasing Images" p.159. Set the Mode Dial to Full Auto. p.44 All the necessary camera settings will be set automatically. Creative Zone These modes give you more control for shooting various subjects. Program AE p.58 Shutterpriority AE p.76 Aperturepriority AE p.78 Manual exposure p.81 8 Automatic depthoffield AE p.82 Attaching the Strap Pass the end of the strap through the camera's strap mount eyelet from the bottom. Then pass it through the strap's buckle as shown in the illustration. Attach the battery. As shown in the illustration, attach the battery securely. To detach the battery, follow the above procedure in reverse. Recharge the battery. For LCE5 As shown by the arrow, flip out the battery charger's prongs and insert the prongs into a power outlet. Do not charge any battery other than Battery Pack LPE5. Battery Pack LPE5 is dedicated to Canon products only. Using it with an incompatible battery charger or product may result in malfunction or accidents for which Canon cannot be held liable. Removing the Battery After opening the battery compartment cover, be careful not to swing it back further. Otherwise, the hinge might break.

<http://superbia.lgbt/flotaganis/1648171748>

Open the battery compartment cover. About the Automatic Self-Cleaning Sensor Whenever you set the power switch to on, the sensor cleaning will be executed automatically. Press the button to display the menu. Set the desired language. Installing the Card Card's write protect switch Shots remaining The number of shots remaining depends on the remaining capacity of the card, image recording quality, ISO speed, etc. While the access lamp is lit or blinking, never do any of the following. When storing the camera without a lens attached, be sure to attach the body cap to the camera. Doing so may cause loss of vision. If the front part focusing ring of the lens rotates during autofocus, do not touch the rotating part. The Image Stabilizer is not effective for moving

subjects. Holding the Camera To obtain sharp images, hold the camera still to minimize camera shake. You can press the shutter button halfway. Then you can further press the shutter button completely. Preventing Camera Shake Camera movement during the moment of exposure is called camera shake. Camera shake can cause blurred pictures. A list of menu functions is on page 200. Display the menu. Press the button to display the menu. When the card is formatted, all images and data in the card will be erased. Even protected images will be erased, so make sure there is nothing you need to keep. The card was formatted by a different camera or a computer. The card is full with images or data. A card-related error is displayed p.209. About Lowlevel Formatting Do lowlevel formatting if the card's recording or reading speed seems slow. Shooting Settings While the menu screen or image is displayed as shown below, you can instantly return to the shooting settings screen shown on the left by pressing the shutter button halfway. With the Basic Zone modes, all you do is point and shoot and the camera sets everything automatically p.198. Aim any AF point over the subject.

<https://airframecreative.com/images/brother-xl-5032-manual.pdf>

All the AF points will be used to focus, and generally the closest object will be focused. Aiming the center AF point over the subject will make focusing easier. Aim the AF point over an area having good contrast, then press the shutter button halfway p.192. If you are too close to the subject, move away and try again. In the Full Auto mode, while you press the shutter button halfway to focus a still subject, the focus will be locked. You can then recompose the shot and press the shutter button completely to take the picture. It also makes flesh tones and the hair look softer than with the Full Auto mode. Shooting Tips The farther the distance between the subject and background, the better. The greens and blues also become more vivid and sharper than with Full Auto. Shooting Tips With a zoom lens, use the wideangle end. To make small things appear much larger, use a macro lens sold separately. Shooting Tips Use a simple background. A simple background makes the flower, etc., stand out better. Move to the subject as close as possible. Shooting Tips Use a telephoto lens. Using a telephoto lens is recommended so you can shoot from afar. Use the center AF point to focus. Shooting Tips Use a wideangle lens and a tripod. When using a zoom lens, use the wideangle end to obtain a wide night view. This mode is also effective for candlelight scenes when you want to capture the ambient light. Shooting Tips If the numeric display in the viewfinder blinks, take care to prevent camera shake. For more details on the playback procedure, see page 147. Single image display Histogram display Playback the image. When you press the button, the last captured image will be displayed. Select the image. In the Program AE mode, you can set various functions and be more creative. In the Program AE mode, the camera sets the shutter speed and aperture automatically to obtain the standard exposure. This is called Program AE. Set the Mode Dial to. Focus the subject.

<http://g8bibliotecas.com/images/brother-xl2600i-manual-online.pdf>

Look through the viewfinder and aim the selected AF point over the subject. To match the subject and ambient lighting level, you can change the ISO speed p.60 or use the built-in flash p.62. In the mode, the built-in flash will not fire automatically. So under low light, press the. By increasing the ISO speed, you can extend the flash range. In bright light, decrease the ISO speed. If the exposure setting in the viewfinder blinks, decrease the ISO speed. In the Basic Zone modes, the optimum AF mode is set automatically. OneShot AF for Still Subjects Suited for still subjects. When you press the shutter button halfway, the camera will focus only once. If this occurs, a picture cannot be taken even if the shutter button is pressed completely. Recompose the picture and try to focus again. Generally, the AF point covering the closest subject will be selected to focus. Therefore, the camera sometimes may not focus the subject you want. With the. If you focus the eyes first, you can then recompose and the face will remain sharp. If it is difficult to focus, select and use the center AF point. The center AF point is the most sensitive among the nine AF points. After taking self-timer shots, you should check the image for proper focus and exposure p.56. If you will not look through the viewfinder when you press the shutter button, attach the eyepiece cover p.195. Even with the same number of pixels, the image quality. Although 1 images require software like Digital Photo Professional provided so they can be displayed on the computer, they also offer flexibility for image adjustments possible only with 1. Picture Style Effects P Standard C Standard The image looks vivid, sharp, and crisp. This is a general-purpose Picture Style suitable for most scenes. For natural colors and subdued images. U Faithful This Picture Style is for users who prefer to process images with their computer. The first half of this chapter explains how to use the modes on the Mode Dial.

Except for, all the shooting modes can be used in combination with the functions introduced in Chapter 3. Frozen action Fast shutter speed Shutter Speed Display The LCD monitor displays the shutter speed as a fraction. However, the viewfinder displays only the denominator. A higher aperture will make the shutter speed slower. Under low light, the shutter speed can be as long as 30 sec. In such cases, increase the ISO speed and hold the camera steady or use a tripod. With flash, the flash exposure will be set automatically to match the aperture that was set. Different metering modes measure the subject brightness differently. Normally, evaluative metering is recommended. Set the metering mode. Press the. You can make the image look brighter increased exposure or darker decreased exposure. The exposure compensation setting will not be automatically canceled

when you turn off the camera. After taking the picture, reset the exposure compensation to zero. You can then choose the best exposure. This is called AEB Auto Exposure Bracketing. The AEB setting will be canceled automatically if the power switch is set to, flash recycling is complete, etc. Shooting Tips Using AEB with continuous shooting. If. To see the resulting effects, take test shots. To make it less sharp, set it toward the E end. The closer it is to E, the softer the image will look. To make it sharper, set it toward the F end. The closer it is to F, the sharper the image will look. The blue sky will look more natural, and the white clouds will look Ye Yellow crisper. With this camera, you can set the color space for captured images to sRGB or Adobe RGB. For normal shooting, sRGB is recommended. In the Basic Zone modes, sRGB is set automatically. About Adobe RGB This color space is mainly used for commercial printing and other industrial uses. Press the button to lock the exposure, then recompose and take the shot. If the subject is too far away and beyond the effective range of the flash, the.

<http://www.lavalledesign.com/wp-content/plugins/formcraft/file-upload/server/content/files/16270ef0d8899d---bowflex-exercise-manual-free.pdf>

Normally, the Auto setting will obtain the correct white balance. If natural looking colors cannot be obtained with, you can select the white balance settings for different sources or set it manually by shooting a white object. This adjustment will have the same effect as using a commercially available color temperature conversion filter or color compensating filter. Each color can be corrected to one of nine levels. This is for advanced users who are familiar with using color temperature conversion or color compensating filters. This is called lens light falloff or drop in peripheral illumination. This can be corrected. For JPEG images, lens light falloff is corrected when the image is captured. With the EOS Utility provided software, you can check which lenses have their correction data registered in the camera. This is called the Quick Control screen. In such cases, mirror lockup is effective. This is called "Live View shooting." Live View shooting is effective for still subjects which do not move. If you handhold the camera and shoot while viewing the LCD monitor, camera shake can cause blurred images. Set the shooting mode to a Creative Zone mode. Live View shooting cannot be used in Basic Zone modes. Display the Live View image. Press the button. The Live View image will appear on the LCD monitor. Metering timer You can change the display time of the exposure setting. The metering mode will be fixed to evaluative metering for Live View shooting. Have the target person face the camera. Focus the subject. Aim the AF point over the subject, and hold down the. If the lens enables manual focusing even while the lens focus switch is set to, turn the focusing ring to attain rough focus. The face will then be detected and. Even when focus has been achieved, pressing the button will focus again. The image brightness may change during and after the AF operation. Subjects in low light. Stripes and other patterns where there is contrast only in the horizontal direction.

www.dqnjl.com/userfiles/files/canon-d420-manual.pdf

Under a light source whose brightness, color, or pattern keeps changing. Although you can focus the target area quickly, the Live View image will be interrupted momentarily during the AF operation. Take the picture only while the Live View image is displayed. AF is not possible with Remote Switch RS60E3 sold separately. Focus the subject. Aim the AF point over the subject, and hold down the button. The Live View image will turn off, the reflex mirror will go back down, and AF will be executed. Magnifying frame AE lock Magnified area position Magnification Set the lens focus mode switch to. Turn the lens focusing ring to focus roughly. Move the magnifying frame. Press the key to move the magnifying frame to the position where you want to focus. If the light source within the image changes, the screen might flicker. If this happens, stop and resume the Live View shooting under the actual light source to be used. Terminate Live View shooting when not shooting images. Before taking a long exposure, stop Live View shooting temporarily and wait several minutes before shooting. The movie file format will be MOV. SD Cards for Movie Shooting When shooting movies, use a card with an SD speed Class 6 " " or higher. If you use a card with a slower SD speed Class,

the movie shooting and playback might not work properly. The sun's heat can damage the camera's internal components. Cautions for movie shooting are on pages 127-128. If necessary, also read the Live View shooting cautions on pages 119 and 120. The screen format will be 4:3. Total Movie Recording Time and File Size Per Minute Movie recording. Metering timer You can change how long the AE lock is to be maintained with the button. In the movie shooting mode and Creative Zone modes, the setting will be the same for the Picture Style, white balance, image recording quality, and exposure compensation except a. If a single movie's file size reaches 4 GB, the movie shooting will stop automatically.

Note that if you shoot movies for a long period in high temperatures, the. You can set this auto poweroff time. When the camera has turned off due to auto power off, you can wake up the camera by pressing the shutter button halfway or any of the following buttons. The captured images are assigned a sequential file number from 0001 to 9999 and saved in one folder. You can change how the file number is assigned. Each time you replace the card, the file numbering restarts from 0001. This is convenient if you want to organize images according to cards. If the replacement card contains images recorded previously, the file numbering of the new images might continue from the file numbering of the existing images in the card. Settings Display Beeper p.130 Auto power off p.131 Sensor cleaning p.142 While the menu is displayed, press the button to display the settings. This works in the and other Creative Zone modes. Shooting Settings AF mode OneShot AF AF point selection Automatic selection. Beep Release shutter Enable without card Review time 2 sec. Flash exposure compensation may be necessary depending on the scene, so this setting is for advanced users. Normally, you need not pay attention to this operation. However, in case visible dust still remains, you can append the Dust Delete Data to the image to later erase the dust spots. Before an important shoot, you should update the Dust Delete Data by obtaining it again. To erase dust spots automatically with the provided software, see the Software Instruction Manual in the CD-ROM. If the sensor needs to be cleaned directly, having it done by a Canon Service Center is recommended. Before cleaning the sensor, detach the lens from the camera. The blowing force can damage the sensor or the spray gas can freeze on the sensor. If smear that cannot be removed with a blower remains, having the sensor cleaned by a Canon Service Center is recommended.

Here you will learn how to playback and erase photos and movies with the camera and viewing them on a TV set. Playback the image. When you press the button, the last captured image will be displayed. During image playback, turn the dial to display the shooting date. Magnified view is not possible during the image review immediately after the image is taken. Press the button to display the image. Select a movie. Press the key to select the image. During the single image display, the icon displayed on the upper left indicates that it is a movie. During the index display, the perforation on the left edge of the image indicates that it is a movie. Play Pressing toggles between play and pause. Adjust the slow motion speed by pressing the key. Slow motion The slow motion speed is indicated on the upper right. First frame Displays the movie's first frame. Each time you press, a single previous frame is Previous frame displayed. Number of images to be played Function All images All the still photos and movies in the card will be played back. Still photos and movies taken on the selected shooting date will Date be played back. During movie playback, you can adjust the sound volume by turning the. During pause, you can press the Connect the AV cable to the camera's terminal. With the plug's logo facing the back of the camera, insert it into the terminal. Connect the AV cable to the TV set. Do not connect any other device's output to the camera's terminal. Doing so may cause a malfunction. Some TVs might not be able to display the captured images. In such a case, use the provided AV cable to connect to the TV. Image protect icon If you format the card p.40, the protected images will also be erased. Once an image is protected, it cannot be erased by the camera's erase function. Protected images p.158 will not be erased. Once an image is erased, it cannot be recovered. Make sure you no longer need the image before erasing it.

To prevent important images from being erased accidentally, protect it. To also erase protected images, format the card instead p.40. The most detailed shooting information is shown below. The RGB histogram display is for checking the color saturation and gradation. The camera is compatible with "wPictBridge" which is the standard for direct printing. Digital Print Order Format DPOF p.173 DPOF Digital Print Order Format enables you to print images recorded in the card according to your printing. Connecting the Camera to a Printer Set the camera's power switch to. Set up the printer. For details, see the printer's instruction manual. The camera cannot be used with printers compatible only with CP Direct or Bubble Jet Direct. Do not use any interface cable other than the one provided. If there is a long beeping sound in step 5, it indicates a problem with the printer. Some settings might not be available. For details, see the printer's instruction manual. Select the type of the paper loaded in the printer, then press. When using a Canon printer and Canon paper, read the printer's instruction manual to check what paper types can be used. The image's Exif data is used to make automatic corrections. EOff No automatic correction will be performed. The image will be printed with higher saturation to produce EVivid more vivid blues and greens. Just select the image and press the With the Adjust levels screen displayed, press the. Set the trimming frame size, position, and aspect ratio. The image area within the trimming frame will be printed. Changing the trimming frame size When you press the. The smaller you make the trimming frame, the grainier the picture will look on the print. While trimming the image, look at the camera's LCD monitor. If you look at the image on a TV screen, the trimming frame might not be displayed accurately. This is called direct image transfer.

Before connecting the camera to a computer, be sure to install the provided software EOS DIGITAL Solution Disk on CD ROM in the computer. Before disconnecting the cable, turn off the camera. Pull out the cable by grasping the plug instead of the cord. To start the image transfer, press the button. New images Images which have not yet been transferred to the computer will be selected by the camera automatically and transferred. Transfer order images You select the images and they are transferred to the computer in a batch. You can do it with Custom Functions. Custom Functions can be set and used only in Creative Zone modes. The dynamic range is expanded from the standard 18% gray to bright highlights. The gradation between the grays and highlights becomes smoother. With setting 1, noise in the shadow areas may be slightly more than usual. With setting 1, the settable ISO speed range will be 200 3200. About My Menu settings Sort You can change the order of the registered menu items in My Menu. The back of this chapter also has an index to make it easier to look up needed information. Do not connect or disconnect the power cord while the camera's power switch is set to To prevent this, use the eyepiece cover p.23 attached to the camera strap. During Live View shooting and movie shooting, attaching the eyepiece cover is unnecessary. When an EXseries Speedlite sold separately is attached to the camera, almost all the autoflash control is done by the camera. In other words, it is like a highoutput flash attached externally in place of the builtin flash. PowerRelated Problems The battery cannot be recharged with the battery charger provided. Do not recharge any battery pack other than genuine Canon Battery Pack LPE5. The camera does not operate even when the power switch is set to. Auto power off is in effect. The builtin flash's popup mechanism moves slightly. This is normal. The shutter makes two shooting sounds during Live View shooting.

If you use flash or if ISO 3200 or higher is set, the shutter will make two sounds each time you shoot p.107. If dust is adhering to the LCD monitor, wipe its surface with a lens cloth or soft cloth. In low or high temperatures, the LCD monitor display may seem slow or might look black. The correct date and time has not been set p.29. No image appears on the TV screen. Make sure the AV cable or HDMI cable's plug is connected all the way in p.156, 157. If there is a problem with the camera, an error message will appear. Live mode, Face detection Live mode Contrast detection The camera's specifications and exterior are subject to change without notice. If a problem occurs with a nonCanon lens attached to the camera, consult the respective lens maker. Specifications. Doing so

may cause fire or a health hazard. If the product does not work properly or requires repair, contact your dealer or your nearest Canon Service Center. Doubleclick the CDROM icon. For Macintosh, it is the icon displayed on the desktop. Turn the dial or press the key to select the ISO speed. When "AUTO" is selected, the ISO speed is set automatically. When you press the shutter button halfway, the ISO speed setting will be displayed. Press the button. Press the key to select the AF mode, then press. OneShot AF For still subjects AI Focus AF Switches the AF mode automatically AI Servo AF For moving subjects Press the. Set the Mode Dial to. Press the key to select the quality, then press. Imagerecording quality A Picture StyleN Style P Standard Q Portrait R Landscape V Monochrome For Neutral and Faithful, see page 74. Pixels Possible shots A Picture StyleN. In the Basic Zone modes, you can select certain drive modes and the imagerecording quality. HEADQUARTERS CANADA 6390 Dixie Road, Mississauga, Ontario L5T 1P7, Canada CANON CANADA INC. Using a nonCanon EF lens with an EOS camera may not result in proper camera or lens operation.
